Sector	Industrial/Utilities
Client	National Grid Property Holdings
Awards	NG Best Large Project Delivery 2017 NG Best Project Documentation 2017 CCS National Site Award Silver 2017 CCS National Site Award Bronze 2017

Erith have been framework contractors to National Grid for the remediation of former Gasworks sites since 1997 and to date have been involved in over 100 such projects ranging in value from £100,000 to £16,000,000.

Projects have covered a wide geographical area including Central London, Kent, Wales, Cornwall and the Isle of Wight. All work has been completed to the high levels of health, safety, quality and the environment required of National Grid.

Key to success is the long term relationship that has developed between Erith and National Grid at corporate and individual levels. All projects involve pre-construction discussion and liaison up to 12 months which includes developing cost plans, methodologies, remediation strategies and assisting in planning and other regulatory matters.

- The exact nature and scope of works varies between projects but includes:
- On-Site treatment of materials
 - Earthworks including, laying of drainage, levelling and hard landscaping
 - Disposal /treatment of contaminated waste
 - Demolition
 - Asbestos Removal

All of the above works were carried out in accordance with HSG47 due as a result of sites containing in-situ underground services.

The client's aim is to take contaminated brownfield sites and make them fit for development by adding value. Consistently, this is achieved by utilising and developing innovative techniques with the client's consultancy team.
